

Treatment Plan

You and your doctor have made a decision today about your rheumatoid arthritis medicines.

MEDICINE NAMES AND DOSES

OTHER INSTRUCTIONS:

☐ REFRIGERATE

University of California, San Francisco

Considerations

Most of these medicines should NOT be taken if you are considering pregnancy, have active tuberculosis (TB) or exposure to TB, drink alcohol, or have liver disease. It is very important to talk to your doctor about these issues before you choose a medicine.

Methotrexate

Hydroxychloroquine

Leflunomide

Sulfasalazine

Golimumab

Adalimumab

Certolizumab

Etanercept

Rituximab

Infliximab

Abatacept

Tocilizumab

Cost

Average costs per month.
What you pay will depend on your insurance.

Methotrexate
(Rheumatrex®
or Trexall®)

\$35-\$395

Hydroxychloroquine
(Plaquenil®)

\$30-\$195

Leflunomide
(Arava®)

\$430-\$675

Sulfasalazine
(Azulfidine®)

\$20-\$155

Golimumab
(Simponi®)

\$1,985

Adalimumab
(Humira®)

\$1,830

Certolizumab
(Cimzia®)

\$3,510

Etanercept
(Enbrel®)

\$1,865

Rituximab
(Rituxan®)

\$1,105

Infliximab
(Remicade®)

\$790-\$3,765

Abatacept
(Orencia®)

\$1,185-\$2,365

Tocilizumab
(Actemra®)

\$1,115-\$2,230

How Soon?

These medicines do not work right away. In general, these medicines begin to work between 2 and 12 weeks.

Methotrexate

Hydroxychloroquine

Leflunomide

Sulfasalazine

Golimumab

Adalimumab

Certolizumab

Etanercept

Rituximab

Infliximab

Abatacept

Tocilizumab

How Often?

Methotrexate*

Hydroxychloroquine

Leflunomide

Sulfasalazine

Golimumab

Adalimumab

Certolizumab

Etanercept

*Also available as an injection.

Rituximab

Infliximab

Abatacept*

Tocilizumab

Side Effects

Methotrexate Hydroxychloroquine Leflunomide Sulfasalazine

Common:

Hydroxychloroquine – stomach upset, diarrhea

Methotrexate, Leflunomide, Sulfasalazine – stomach upset, diarrhea, headache, rash, liver inflammation, cold symptoms

Rare serious (less than 1 out of 100 people):

Hydroxychloroquine – eye problems

Methotrexate – lung inflammation

Leflunomide – severe liver injury

Sulfasalazine – severe skin reaction, low blood counts

Golimumab Adalimumab Certolizumab Etanercept

Common: Redness or soreness where needle enters skin, stomach upset, headache, dizziness, high blood pressure.

Rare serious (less than 1 out of 100 people): Reactivation of tuberculosis, serious infection that needs antibiotic by vein in hospital, or cancer (most often skin or blood, like lymphoma).

Rituximab Infliximab Abatacept Tocilizumab

Common: Reaction to infusion, stomach upset, headache, dizziness, high blood pressure.

Rare serious (less than 1 out of 100 people): Reactivation of tuberculosis, serious infection that needs antibiotic by vein in hospital, cancer (most often skin or blood, like lymphoma), or severe infusion reaction.
